# Hybrid SSO

Ester Andersson - 2024-02-19 - API, SAML, integrations and general settings

Learnifier has a Multi-Hybrid SSO solution. This means that you can use several different parallel SSO solutions and at the same time allow manual login. This is important if you both want to use the platform for internal and external training.

When using Hybrid SSO, users need to enter their email address first and then either enter directly or get to an enter-password page.
