Interactivity tools

Ester Andersson - 2024-02-16 - Tips & Tricks

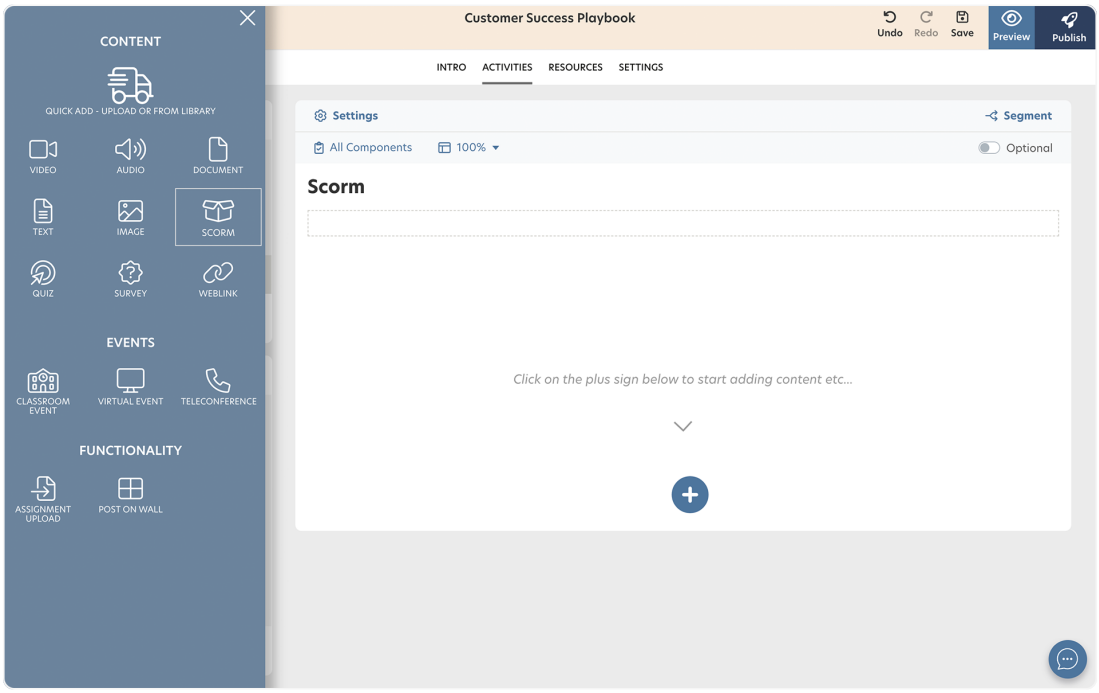

There are several ways to integrate interactivity in your courses with Learnifier components, such as quizzes and surveys, or Post on Wall. However, it is also possible to integrate other tools in Learnifier, which we will go through today.

Note

- Scorm
- H5P
- iFrame

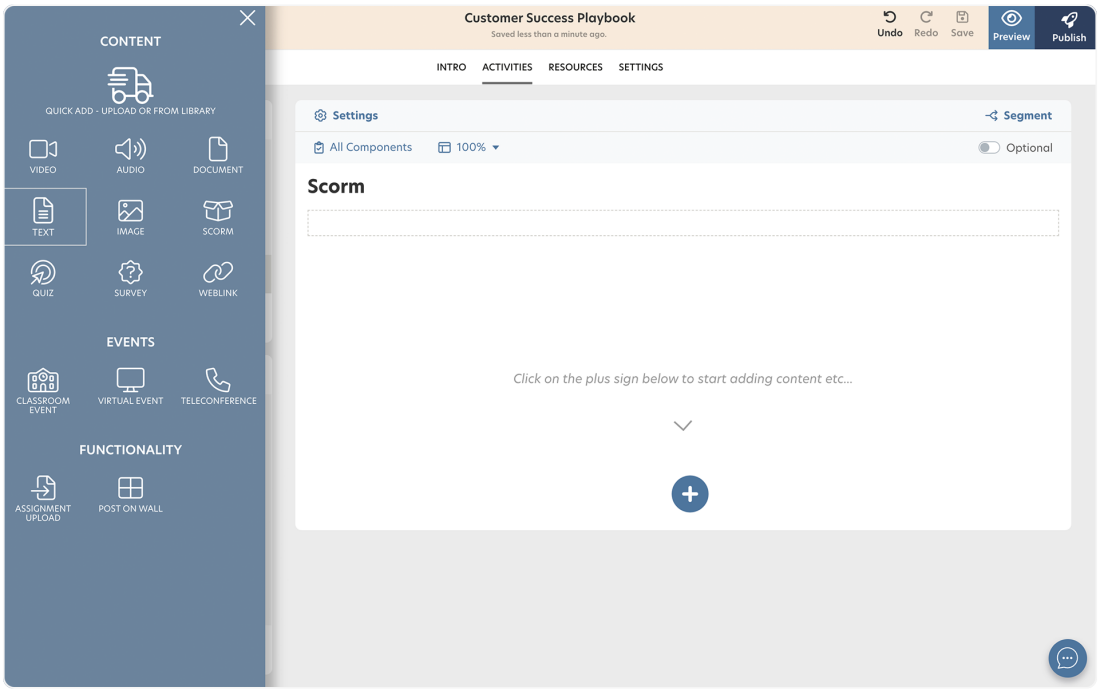

Scorm

1. Click on the plus sign and choose “Scorm”.
2. Add the zip-file
3. All done!
4. Progress may be tracked depending on the settings in the scorm file.
5. Please note that we only support Scorm in the format of 1.2.

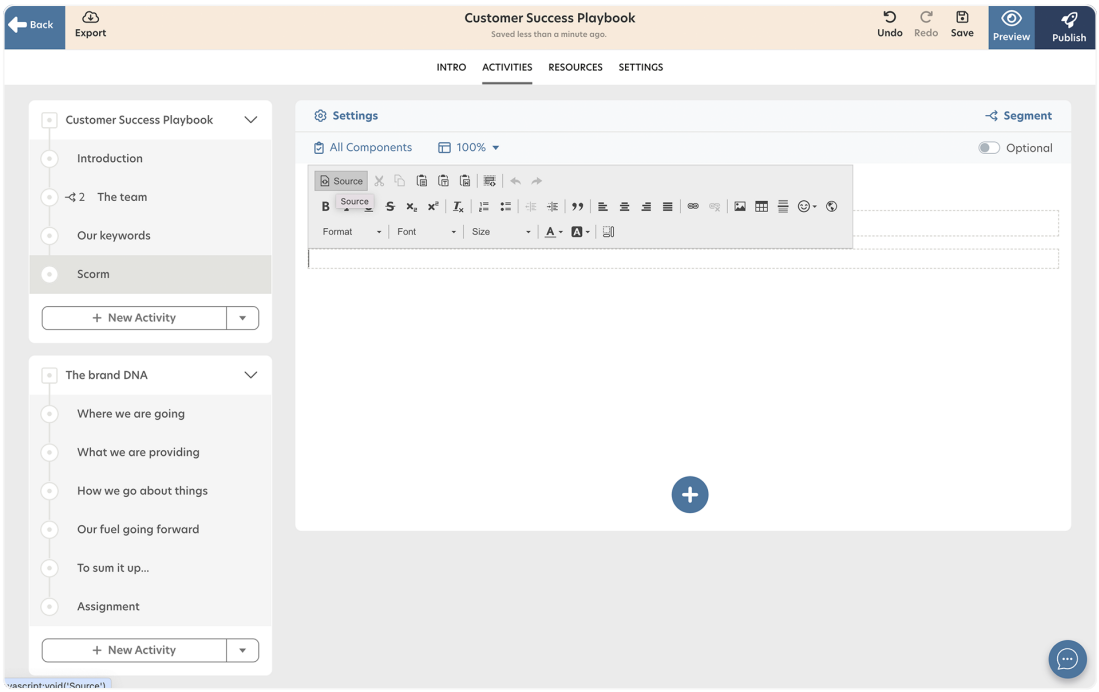

H5P

1. Click on the plus sign and add a text component

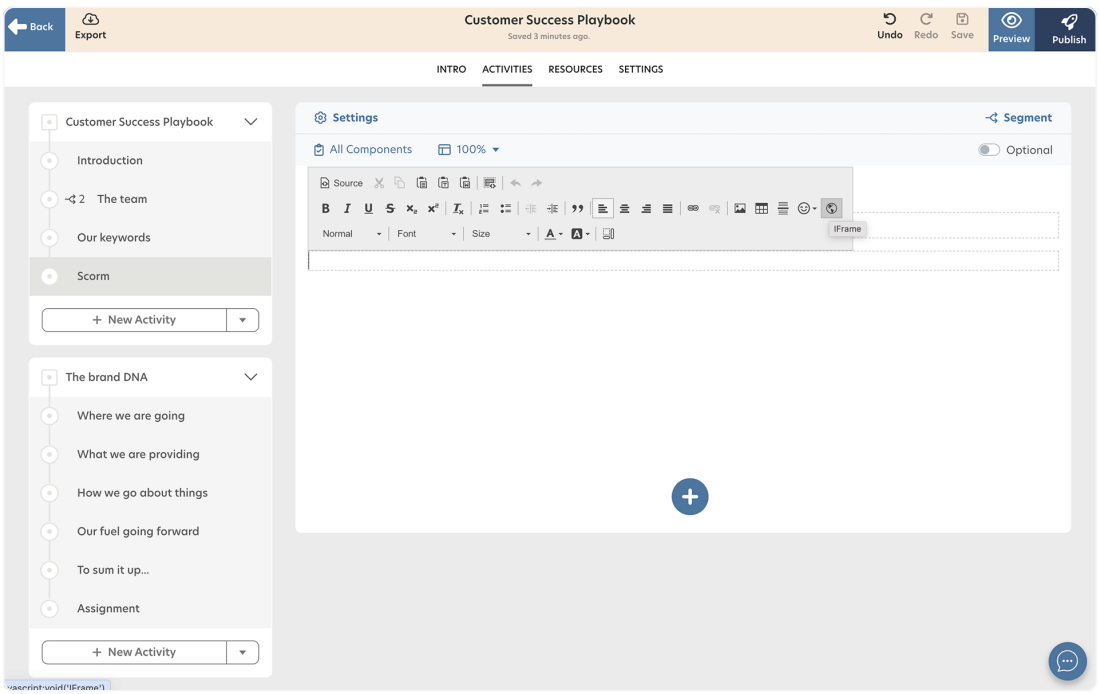

1. Click "Source" and add the embed code that can be found where the content is created.

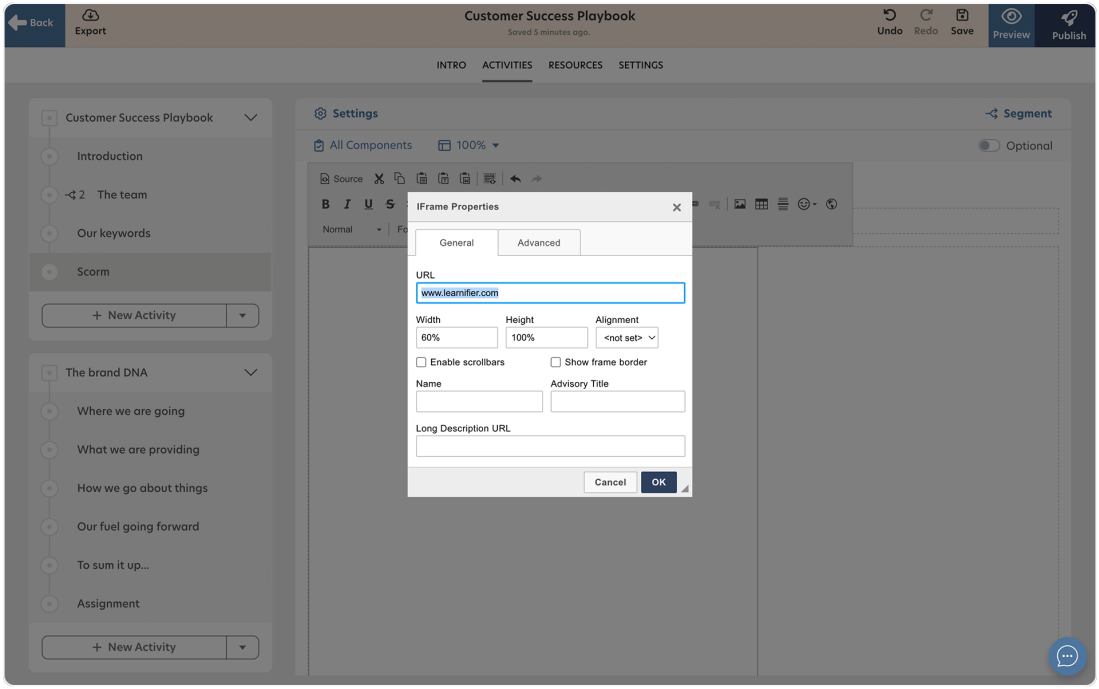

Tip: when you are embedding H5P content or other interactive tools into your Learnifier course, progress cannot be tracked. Therefore, we recommend you change the completion criteria to “Manually set by learner” in the activity settings.

iFrame

1. Add a text component to your course
2. Click on the heart globe in the grey menu

1. Paste the link and add “Height=100%” and change the percent of the width to your choice.

1. Note: Iframe is not recommended to use if you wish to follow accessibility guidelines.
