Release Notes: October 2026

2026-11-13 - Gabriella Eriksson - Release notes

We're continuing to improve the details that make everyday work in Learnifier a little easier and smoother. Here are some of the latest improvements.

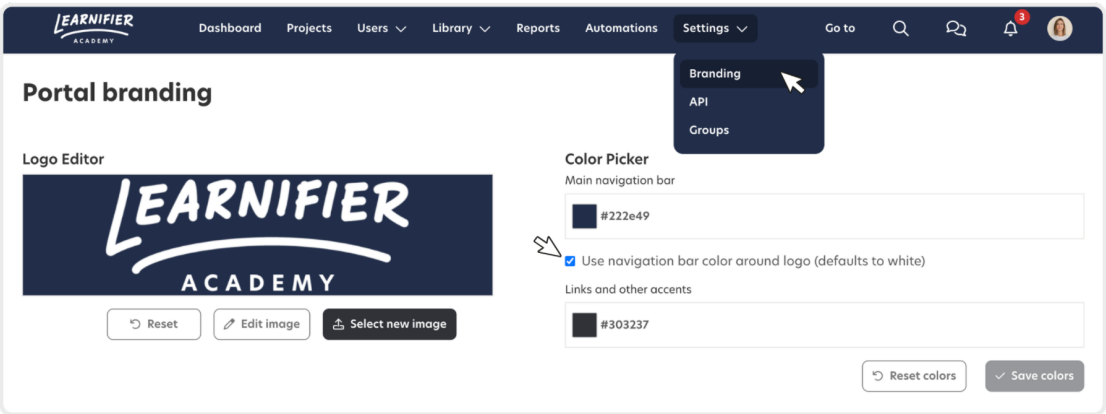

Skip the course information page

Choose whether learners see the course information page or go straight to the course content. Ideal for shorter courses where you want to remove unnecessary steps and make it easier to get started.

More flexible branding

Use your navigation color as the background behind your logo for a more consistent, polished look across your learning platform.

More improvements in Learnifier

We've made several improvements to make everyday work in Learnifier smoother, with more reliable information, clearer navigation, and a better experience for both administrators and learners.

Better overview in Team View

We've improved how Team View displays and organizes information about courses, participations, and awards. This includes more consistent filtering, sorting, and handling of expiry dates, helping managers get a clearer and more reliable overview of their teams' learning.

A smoother learning experience

We've made several improvements to keep course information and learning progress up to date.

- **Course catalog:** Session details and availability now display correctly when navigating between sessions.
- **Course progress and updates:** Activity progress, course lists, notifications, and chat posts update more reliably when changes are made.
- **Terms of Service:** Learners are only prompted to accept terms when their organization has configured its own Terms of Service.

Improvements for administrators and course creators

- **Active users report:** Administrators can now filter the Active users report by client in Back Office, making it easier to review usage for individual clients.
- **Flashcards:** Images now display more reliably in the preview when creating or editing flashcards.
- **Reports:** Improved handling of missing date values makes reporting more reliable.
