Introducing: Flashcards!

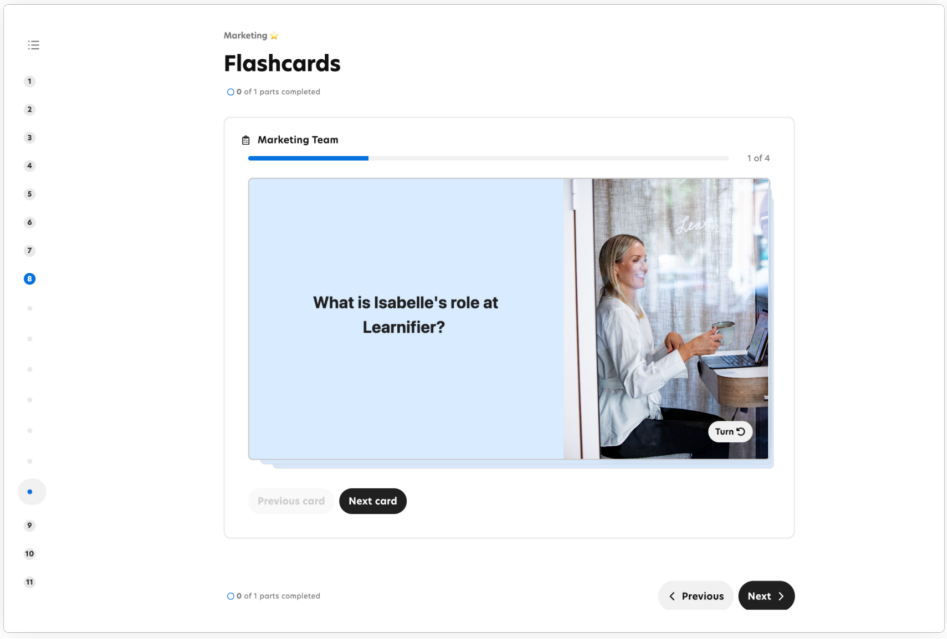

2026-01-15 - Gabriella Eriksson - Product Highlight

When participants repeat learning in small doses, knowledge sticks better over time. **Flashcards** is an interactive content type that makes it easy to build quick repetition and knowledge reinforcement into your courses in Learnifier. Learners move through short, focused cards that help them remember, understand, and apply knowledge over time.

Flashcards are especially useful for microlearning and for reinforcing key concepts, routines, and core messages. By revisiting content in smaller steps, learners are more likely to complete the training and bring the knowledge into their everyday work.

How does it work?

- Add Flashcards as a content type in a course activity or in the library, and create a set of cards with questions, concepts or statements
- Learners interact by flipping the cards and moving forward at their own pace
- Use Flashcards for repetition at the end of a module or as recurring reinforcement throughout the course

Beta information

Flashcards is now available to all customers, and it is still in beta. Over the coming weeks, we will continue to fine-tune the feature and release improvements on an ongoing basis. We welcome your feedback to help make the experience even better.
