Enjoy the new design and smooth experience on the Project page!

2025-05-12 - Gabriella Eriksson - Product Highlight

The new layout is now the default experience and is designed to streamline your work, offering faster navigation, a better overview, and a clearer structure. The result? A smoother workflow and greater opportunities to drive learning that creates value for your organisation.

What's New?

- **New layout and navigation**

The menu has been moved to the left side for a cleaner overview and easier access to different parts of the project. This also allows for a more efficient use of space, improving both clarity and navigation.

- **Project and course naming have been separated and relocated.**

The project name (visible to admins) and the course name (visible to participants) are now managed independently. Simply click the name field to edit either one.

- **Clearer publishing flow**

A new **"Publish Course"** button has been added to the far right, making it easy to spot when you're ready to go live!

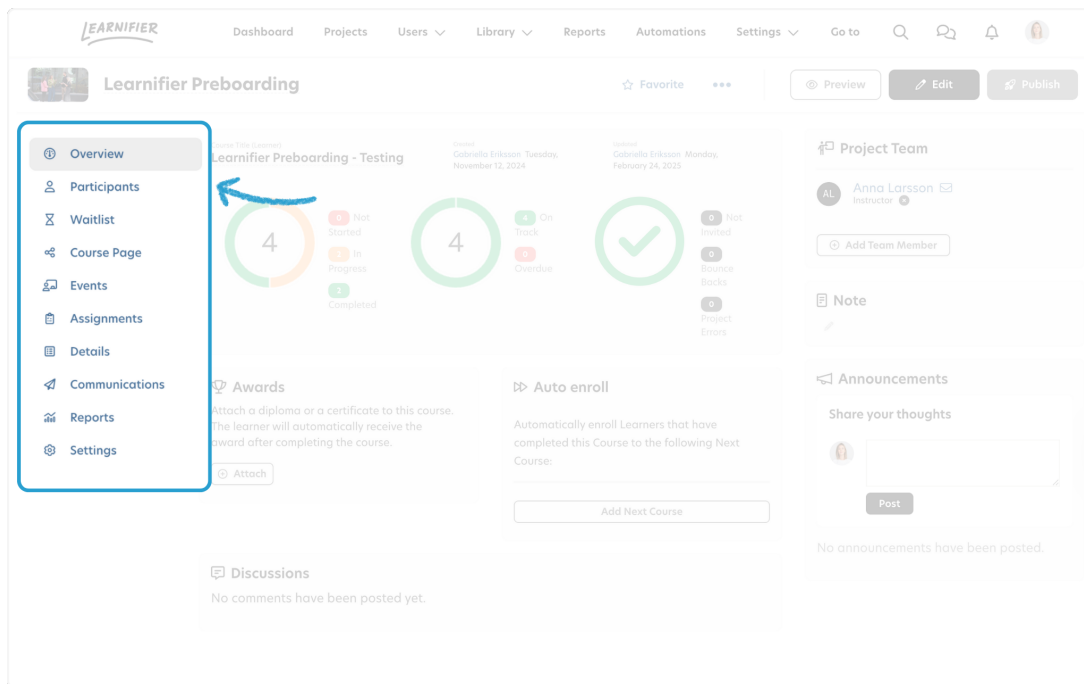

- **Buttons repositioned**

Actions like **editing** and **previewing** the course are now located on the right-hand side, exactly where you'd expect them.

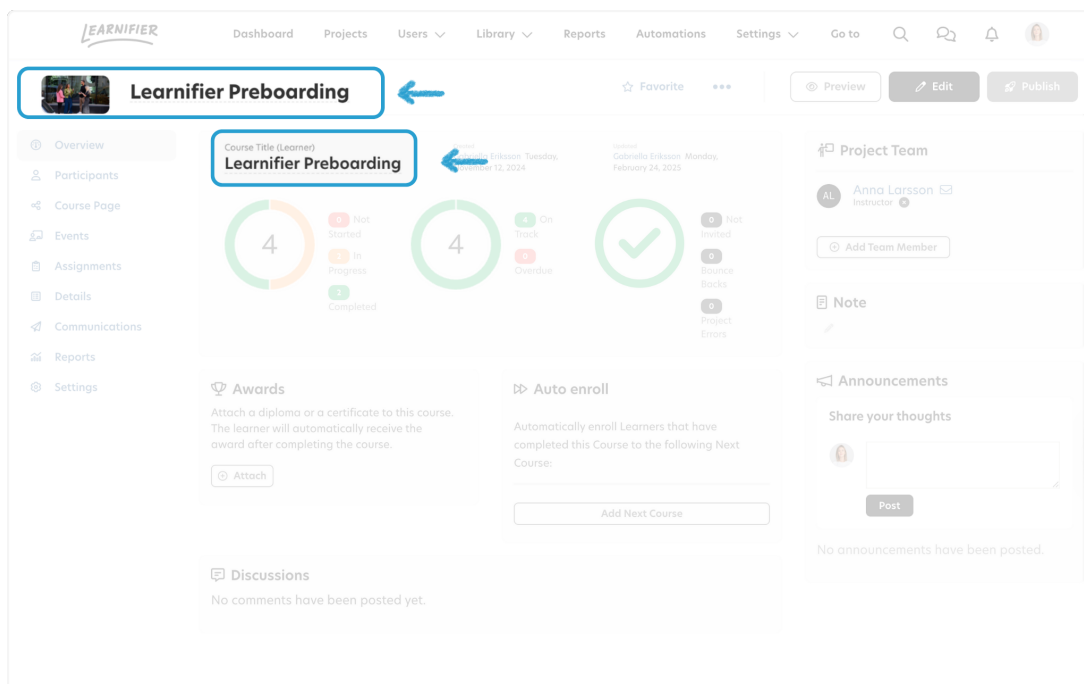

- **Cleaner project management**

Options such as **Create Template**, **Duplicate**, and **Delete** have been relocated to the overflow menu (...) for a cleaner, more streamlined interface.
