Release note: April 2026

2026-05-06 - Gabriella Eriksson - Release notes

These release notes give you a quick overview of what is new in Learnifier, including new features, improvements, fixes, and updates. Our goal is to keep you informed and help you get more value from the platform.

Summary

- More control over course catalog visibility across portals
- New HR integration to automate user and org data management
- Improved reporting capabilities for compliance and tracking
- Increased stability across reports, translations, and learning components

Live

Hailey HR integration

A new integration with Hailey HR allows it to act as the source of truth for user and organizational data. Changes such as new hires, role updates, or terminations are automatically synced to Learnifier.

This reduces manual administration, ensures correct access at the right time, and improves data consistency across systems. It also lowers the risk of inactive or incorrect user accounts.

> *Available to: Customers on the Professional & Enterprise plan using Hailey HR in their organisation*

Course catalog: flexibility per portal

You can now control course catalog visibility per portal and per user. Previously, the catalog was global across all portals, which could result in empty or irrelevant views.

This creates a cleaner, more relevant experience and reduces confusion for end users, while giving admins better control over content targeting. It also supports segmented learning strategies and improves engagement by ensuring users see the right training.

> *Available to: Professional & Enterprise*

Enterprise award report enhancements

Award reports now include visibility of replaced certificates along with new fields such as ID and “Replaced by,” enabling full tracking of certificate history.

This improves transparency and enables audit trails, which is especially important in regulated industries. It also supports compliance and helps manage recertification workflows more effectively.

> *Available to: Enterprise*

Fixes

AI translation stability improvements

Improvements to the translation pipeline reduce failures and introduce fallback handling for more complex content. This results in fewer stuck translations and more predictable behavior, improving throughput and reducing manual intervention.

> *Available to: AI-agreement*

Flashcard fixes

Resolved multiple issues affecting flashcard functionality. This creates a more stable and reliable learning experience, reducing friction and supporting better completion and retention in training programs.

Available to: Starter, Professional & Enterprise

Report stability & sorting fixes

Fixed errors when opening certain reports and improved column sorting. This leads to a more stable reporting experience and makes it easier to analyze and act on data efficiently.

Available to: All

Reporting data accuracy fixes

Resolved issues affecting report filtering and date values. This ensures more accurate and complete data, reducing the risk of misinterpretation and improving confidence in reporting.

Available to: All

Custom Reports naming improvement

Updated how reports are labeled when shared, showing only the report name along with the organization or project. This makes reports easier to understand for stakeholders and reduces confusion.

Available to: Enterprise and Professional with an add-on

Catalog title consistency fix

Corrected an issue where admin titles were shown instead of learner-facing titles in the course catalog. This ensures a consistent and accurate learner experience.

Available to: Professional & Enterprise

Assignments tab cleanup

Removed Flashcard and Checkpoint components from the Assignments tab in the project page. This reduces confusion and ensures the view reflects accurate and supported data.
