Release note: February/March 2026

2026-03-25 - Gabriella Eriksson - Release notes

These release notes give you a quick overview of what is new in Learnifier, including new features, improvements, fixes, and beta updates. Our goal is to keep you informed and help you get more value from the platform.

Live

Microlearning

Learners can now search and filter microlearning content. This makes learning easier to navigate and more motivating, while helping learners find relevant content faster. It can also increase engagement and retention while giving admins better conditions for content development.

Available to: *Starter, Professional & Enterprise as an add-on*

Team View: Participations

A new tab in Team View gives team managers an overview of team members' course participations across all

enrolled courses. This makes it easier to follow each team's learning journey and quickly identify gaps or areas that need attention.

Available to: *Professional & Enterprise*

Configurable course templates

You can now configure Settings and Catalog Settings within Templates. This helps organizations standardize course setup, reduce manual work, and maintain consistency across a large number of courses.

Available to: *Professional & Enterprise*

Project custom fields

You can now include project-specific data, such as hours per category, in certificates using custom fields. This creates a smoother workflow and makes documentation more accurate and reliable, especially in compliance-related use cases.

Available to: *Professional & Enterprise*

Access and next steps?

Limited permissions for the "Next course" feature

The project selection for "Auto Enroll"/"Next course" now respects admin permissions. This creates a clearer admin experience by only showing relevant options, while reducing the risk of misconfiguration.

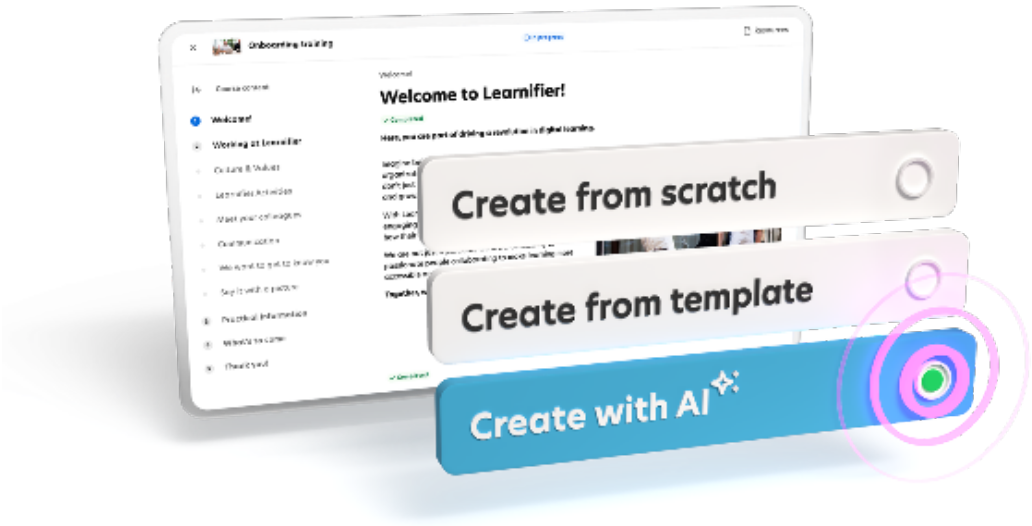

Available to: *Professional & Enterprise*

Live soon!

AI Course Creation

AI Course Creation is coming soon. It will help course creators generate course drafts from prompts or existing material, based on their goals, audience, and preferences.

This will reduce manual work, speed up course creation, and support more consistent production across teams.

Available to: *Starter, Professional & Enterprise*

Haven’t signed the AI agreement yet?!

Fixes

Automation reliability

We fixed an issue where automations did not trigger if custom field values contained leading or trailing spaces. This improves reliability and helps ensure automated enrollments and other rule-based flows work as expected.
