Release note: January/February 2026

2026-02-11 - Gabriella Eriksson - Release notes

Our release notes give you a quick overview of the latest features, improvements, and fixes. We want to keep you in the loop and help you make the most of Learnifier.

Summary

- **Flashcards** are now live for all customers, strengthening knowledge retention through active recall.
- **Reports have been enhanced with pagination and search**, making it easier to navigate and analyze large datasets.
- **AI-supported course creation and a new guided course setup flow** are now available in beta, helping teams accelerate content production.
- Ongoing improvements include early access to **configurable templates**, a controlled **Microlearning** rollout, expanded language support, and enhanced AI stability.

Now Live!

Flashcards

Flashcards are now available to all customers, enabling structured knowledge reinforcement directly within the learning experience. By supporting repetition and active recall, Flashcards help improve retention and long-term knowledge transfer. Increasing the impact of existing training content without requiring additional course production.

> Learn more about Flashcards here

Pagination and Search in Reports

Reports now include pagination and search functionality, making it significantly easier to navigate and analyze large datasets. This reduces admin time spent managing reports, improves oversight, and enables faster access to insights. This is particularly valuable for organizations operating at scale.

In Beta — Open for Early Access

AI Course Creation and New Course Creation Flow

A new, more guided course creation experience has been introduced alongside AI-powered course creation. The updated flow reduces complexity by showing only relevant steps and settings, while AI supports faster content

generation and structuring.

Together, these improvements shorten course production time, lower the barrier for subject-matter experts to create content, and improve consistency across learning initiatives.

> Want to join the beta? Please contact your Customer Success Manager or support@learnifier.com to request access.

Configurable Course Template Settings and Catalog Settings within Templates

Course templates are being expanded to include configurable course and catalog settings directly within the template structure. This enables organizations to standardize setup, reduce manual configuration, and maintain consistency and control across large volumes of courses. The goal is to improve operational efficiency and maintain consistency at scale.

> Want to join the beta? Please contact your Customer Success Manager or support@learnifier.com to request access.

In Beta — Controlled Rollout

Microlearning

Microlearning introduces short, focused knowledge units designed to complement traditional courses and learning journeys. This format enables more flexible, just-in-time learning and supports continuous skill development beyond structured programs.

The feature is currently being rolled out in beta through a controlled release phase to ensure quality and gather feedback before broader availability. This approach helps us refine the experience and deliver the best possible value when it becomes more widely available.

Improvements & Enhancements

Manager on User and Auto Teams (SCIM/API)

Enhancements to manager assignment and automated team handling via SCIM/API integrations strengthen enterprise readiness. These updates improve alignment between HR systems and Learnifier, reduce manual administration, and support scalable user and team management.

New Admin Language: German

German is now fully supported as an admin language, improving accessibility and enabling more efficient local administration in German-speaking organizations.

> Please contact support@learnifier.com if you would like to enable German as an administrator language in your portal.

Back Office Translations

The Back Office has been fully translated across supported admin languages, creating a more consistent and localized experience for administrators. This reduces friction and supports adoption in international organizations.

AI Quiz & Translation Generation — Stability Improvements

Stability improvements to AI-powered quiz and translation generation increase reliability and reduce disruption during content creation. This ensures smoother workflows and greater confidence when using AI-supported tools.
