Product update: Automations Improved

2025-05-26 - Gabriella Eriksson - [Release notes](#)

We've redesigned the automation rule-building experience to make it more intuitive and user-friendly, without disrupting any of your existing automations.

What's New in the Automation Builder?

- **Smarter logic & clearer language**
We've replaced technical symbols with plain, easy-to-read language.
- **Select multiple values within a rule**
It's now possible to select multiple values within a single rule.
- **New feature: Team Selector**
You can now build automation rules based on team structure in Learnifier.
- **Clearer statuses & descriptions**
A more visible status indicator and descriptions are shown directly in the automation overview list.
- **Organize automations into folders**
You can now sort and organize your automations into folders to easily keep track of your workflows.
- **Copy existing automations**
You can now duplicate any existing automation with just one click.

□ **All your current automation rules continue to function exactly as before.** □

This update enhances the interface without affecting existing configurations.

More information about the automation feature can be found [here](#) □
